

Is it really 600W?

WE'VE TESTED ALL THE NEW 600W BALLASTS AVAILABLE ON THE MARKET AND FOUND SOME SURPRISING RESULTS

Most of them claim to be “600W”, but what does this actually mean? After months of testing and investigation we were shocked to discover that most of these new ballasts are not actually “600W” ballasts at all. Most of the ballasts sampled in our tests significantly under powered the lamp, leaving the end user with a sub-standard system.

“ Please don't take our word for it ! Our results have been endorsed by Venture Lighting Europe. Using a simple energy meter, you can see the light for yourself, using our free guide. ”

Sub-standard ballasts are cheaper and easier to make, but how much will this cost you?

- Significantly less PAR & Lumens
- Reduced light spectrum
- Less power efficiency
- Lower crop yields and quality
- Misleading
